**...TROPICAL STORM WATCHES NOW IN EFFECT FOR PARTS OF SOUTHWEST GA...  
...TROPICAL STORM WARNINGS & HURRICANE WATCHES REMAIN IN EFFECT  
ACROSS MUCH OF THE FLORIDA BIG BEND COASTLINE...**

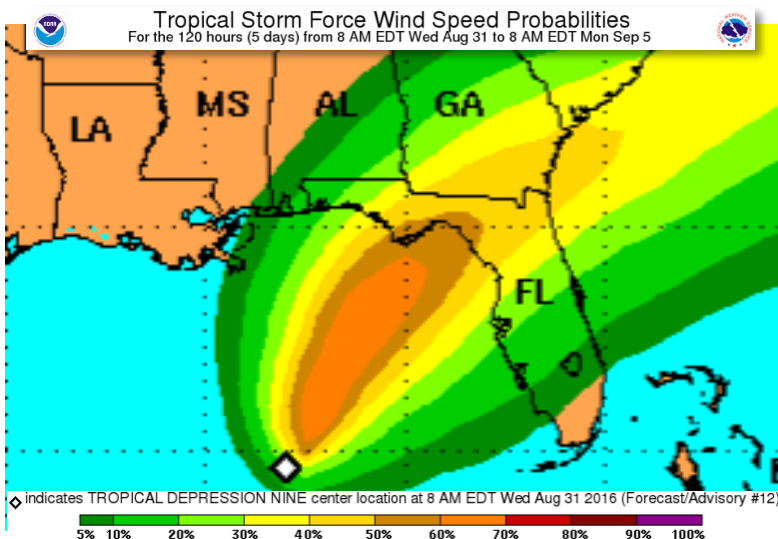

## Current Position and Discussion

## Tropical Depression 9

- Strengthening is likely and intensification to a tropical storm is expected today.
- Tropical Storm Warnings** now in effect from the Walton-Bay County line to the Suwannee River and southward, the adjacent Gulf of Mexico, inland portions of the Florida Big Bend and now parts of southwest Georgia.
- There remains the possibility that this system will strengthen to a minimal hurricane prior to landfall. Therefore, a **Hurricane Watch** remains in effect from Indian Pass along the FL Big Bend coast to Suwannee River and points south.

## Wind Speed Probabilities

## Timing:

- Tropical storm force winds are expected to reach our offshore marine area Thursday morning and spread along the Big Bend coastline from west to east Thursday evening. Landfall is expected in the Big Bend after midnight Thursday night.
- There is now a 5 in 10 chance for tropical storm force winds over the Big Bend coast and a 3 in 10 chance around Panama City, FL.

## Tropical Depression 9 – Inland Hazards & Impact Assessment

### ADV 11 – Wind Hazard

	Wind Hazard
None	Sustained winds up to 38 mph with gusts to 45 mph
Elevated	Sustained winds 39 to 57 mph with gusts of 46 to 73 mph
Moderate	Sustained winds 58 to 73 mph with gusts of 74 to 95 mph
High	Sustained winds 74 to 109 mph with higher gusts
Extreme	Sustained winds greater than 110 mph with higher gusts.

### ADV 11 – Inland Flood

	Inland Flooding
None	No Flooding
Elevated	Minor flooding of Elevated lying areas
Moderate	Minor to moderate flooding, impacting Elevated lying areas. Streams and rivers will rise to minor flood stage.
High	Moderate to major flooding, impacting a widespread area. Streams and rivers will rise to moderate to major flood stage.
Extreme	Major to catastrophic flooding, impacting a widespread area. Streams and rivers will rise to major to record flood stage.

### ADV 11 – Tornadoes

	Storm Tide
None	No Tornadoes
Elevated	1 to 3 tornadoes, F1 or less intensity
Moderate	3 to 5 tornadoes, some up to F2 intensity
High	5 to 10 tornadoes, some up to F2 intensity
Extreme	More than 10 tornadoes, many F2 intensity. Ivan like outbreak

### Impact Assessment:

- A reasonable worst-case scenario shows tropical storm force winds are possible across the entire forecast area. If the system strengthens into a hurricane, hurricane force winds cannot be ruled out near the coast.
- Storm total rainfall of 9-12 inches is possible from Perry south across the eastern Big Bend, 6-8 inches from Apalachicola to Tallahassee to Valdosta, and 1 to 3 inches northwest of an Albany to Panama City line. This would cause minor to moderate flooding across the Florida Big Bend and south central Georgia..
- SPC indicates a slight risk of tornadoes on Thursday for the Big Bend and parts of GA.

## Tropical Depression Nine – Storm Surge & Impact Assessment

- This graphic represents areas that are under a prototype storm surge warning where at least 3 feet of inundation should be planned for.

### ADV 12 - Storm Inundation

11 am EDT, August 31, 2016

	Storm Tide
None	0-1 feet above ground
Elevated	1 to 3 feet above ground
Moderate	3 to 6 feet above ground
High	6 to 9 feet above ground
Extreme	Greater than 9 feet above ground

### Impact Assessment:

- A moderate threat of inundation is forecast for the Florida Big Bend coastline where 3 to 5 feet of inundation is possible along the coast mainly from the Ochlockonee River eastward. 2 to 4 feet of inundation is expected from the Ochlockonee River westward to Indian Pass. These values will be higher if the system becomes a hurricane.

### Timing:

- Storm surge flooding could begin Thursday morning with maximum inundation Thursday night.
